

# Your calving system

**Year-round** – Generally, year-round herds calve for at least 10 months of the year.

**Split calving** – Split calving herds calve in two or three distinct time periods each year. With two periods, they are commonly spring and autumn.

**Seasonal calving** – In seasonal calving herds, all cows calve in a single time period each year.

When information is specific to only one of the systems, check the separate heading, i.e. ‘Year-round’ and ‘Seasonal/Split’, to see what is appropriate for you.
